

SATMONITOR

Satmonitor is a platform-based enterprise software developed by Italspazio that allows Internet Service Providers to offer their customers with a comprehensive and **real-time overview of their connected assets**. The software is exclusively compatible with iDirect Systems and can be integrated with any application that the hardware natively supports.

The software platform is designed to integrate essential services such as real-time weather forecast and technical satellite data (Coverage, Latency, IP Traffic Data etc.) for control and security purposes.

Furthermore, **the software also provides a tracking function that enables the end-user** to have a real-time overview of their assets through an array of color-coded markers displayed on geographical mapping software powered by Google Maps.

VSAT & MARITIME SERVICES

In the circumstance that the interested party also requires VSAT & Maritime services, **they can contact Italspazio for more information.**
